ThinkHub YouTube Prompt System

One reusable copy-paste workflow for every weekly video

Daksh Khandelwal
Founder, ThinkHub

THINK. LEARN. GROW.

A reusable system for research, presentation design, visual creation, YouTube publishing and scripting.

2026 Edition

The Core Rule

For every new ThinkHub video, **do not edit the prompts**.

At the beginning of a new chat, paste the video's title/topic/description or other initial video brief. Then paste Prompt 1. After that, paste the prompts one by one in the same conversation.

Every prompt below is intentionally written to use the information already provided **above in the conversation**. It should not ask you to repeat the topic, title, subtitle, audience, duration or other basic information unless something is genuinely missing.

Workflow: Video brief → Prompt 1 → Prompt 2 → Prompt 3 → Prompt 4 → Prompt 5 → Prompt 6 → Prompt 7 → Prompt 8 → Prompt 9.

What You Do Each Week

1. Paste the video's title/subject/description at the top of the chat.
2. Paste Prompt 1 exactly as written.
3. Paste Prompt 2 exactly as written, using Prompt 1's research.
4. Paste Prompt 3 for NotebookLM deck creation.
5. Upload the generated PPT/PDF and paste Prompt 4 for the quality audit.
6. Upload your profile photo/logo when visual generation is required and paste Prompt 5.
7. Paste Prompt 6 for the YouTube publishing package.
8. Paste Prompt 7 for the thumbnail.
9. Paste Prompt 8 for the opening/closing script.
10. Use Prompt 9 as the final publishing checklist.

Important: Do not write things such as "Topic: [TOPIC]" or "Video title: [VIDEO TITLE]" inside the prompts. The model should read the information from the earlier messages.

Prompt 1 — Deep Research & Complete Topic Study

Use the video information I provided above as the source of truth for what this video is about. Do not ask me to repeat the topic, title or description.
Create a concise, accurate and beginner-friendly research foundation for my 30–35 minute ThinkHub educational YouTube video.
Cover only the essential information:

- **Introduction:** What is the topic, why does it matter, and what should viewers understand?
- **Core Concepts:** Explain the 5–10 most important concepts and terminology in simple language.
- **How It Works:** Explain the complete working process step by step, including important behind-the-scenes operations.
- **Real-World Examples:** Include 3–4 practical and genuine examples or scenarios.
- **Technology and Architecture:** Explain the important components, tools, systems and technical workflow wherever relevant.
- **Advantages and Limitations:** Cover major benefits, challenges, risks and common misconceptions.
- **Latest Developments:** Include only significant and relevant recent developments.
- **Interesting Insights:** Add a few surprising facts, useful comparisons or lesser-known details.

Research Guidelines:

1. Keep the research concise, structured and easy to understand.
2. Use simple English suitable for beginners.
3. Explain technical terminology whenever necessary.
4. Prioritize essential knowledge over unnecessary details.
5. Avoid lengthy historical backgrounds, excessive statistics and complicated technical deep-dives.
6. Do not repeat information across sections.
7. Use verified facts and reliable sources, preferably official documentation and reputable references.
8. Never invent statistics, facts, examples or references.
9. Mention when information varies by implementation, provider or version.

Final Output:

- Organize the research using clear headings and bullet points.
- Include important facts, explanations and practical examples.
- Provide real source links wherever relevant.
- Make the research sufficient to prepare a 30–35 minute educational video.
- Keep the total output approximately 1,500–2,000 words maximum.

Important: I need a compact research document, NOT an exhaustive research report or video script. Focus on what I actually need to understand and explain to my audience.
Do not create slides, thumbnails, opening scripts or closing scripts. I will use this research directly as source material in Google NotebookLM.

Prompt 2 — 15-Slide Blueprint

Using the video information already provided above and the research you just created, build the complete 15-slide blueprint for the ThinkHub video.
Do not ask me for the topic or title again.
For each of the 15 slides provide:

1. Slide number and short title.
2. The purpose of the slide.
3. The 3–6 essential ideas that must be communicated.
4. The dominant visual: diagram, flowchart, architecture, timeline, comparison, screenshot, animation concept, etc.
5. What should be spoken by me rather than written on the slide.
6. A useful real-world example or analogy when appropriate.
7. Approximate speaking time.

Build a strong story: hook → context/basics → how it works → behind the scenes → real-world example → deeper/technical details → security/limitations → key takeaway.
Keep slides visual and information-rich, not paragraph-heavy. Do not add filler slides. Every slide must have a clear job.
Make the 15 slides together capable of supporting approximately 30–35 minutes of explanation.
End with a short "15-slide story" summary explaining how the whole presentation flows.

Prompt 3 — NotebookLM: Detailed Deck + Presenter Slides

Using everything established above, including the original video brief, verified research, and approved 15-slide blueprint, help me prepare the descriptions for NotebookLM's "Describe the slide deck" section.
I want to create **two separate PDF versions of the same 15-slide presentation**:
1. Detailed Deck — a comprehensive, informative and self-contained deck for reading and learning, with clear explanations, important context, examples, definitions and useful visuals.
2. Presenter Slides — a clean, visual and engaging deck for a 30–35 minute YouTube presentation, with concise text, strong visuals, diagrams, processes and key talking points.
Using the screenshot/interface shown above as reference, give me **two short, polished, paste-ready descriptions** that I can directly put into NotebookLM's "Describe the slide deck" box.
Keep each description concise enough for NotebookLM, but detailed enough to communicate the desired content, visual style, storytelling and purpose.
Do not create the slides. Do not create a 30-slide presentation. Do not repeat the research or 15-slide blueprint.
Output only:
A. Detailed Deck Description
Paste-ready description

B. Presenter Slides Description
Paste-ready description

Prompt 4 — PPT/PDF Quality Audit

I have uploaded the generated PPT/PDF for the video discussed above.
Audit it as a strict, honest YouTube educational-content reviewer. Do not ask me to repeat the topic; infer it from the conversation and compare the deck against the research and 15-slide blueprint already created.
Check:

1. Factual and technical accuracy.
2. Whether the complete topic is actually covered.
3. Missing concepts, steps or important context.
4. Logical flow and storytelling.
5. Whether it can genuinely support a 30–35 minute explanation.
6. Slide readability and text density.
7. Visual quality and usefulness of diagrams.
8. Repetition, filler or unnecessary content.
9. Beginner accessibility without losing technical depth.
10. Realism of examples.
11. Potentially misleading wording.
12. Unsupported claims, fake-looking links or suspicious citations.
13. Whether the deck actually matches the research and blueprint.

Give me: A. Overall score out of 10. B. What is excellent. C. What must be fixed before publishing. D. What is optional to improve. E. Slide-by-slide corrections where necessary. F. Final verdict: Publish / Minor fixes / Major revision.
Be direct. Do not praise the deck merely to be polite. Just tell in short and crisp

Prompt 5 — Premium First / Introductory Slide

Using the video information already established in this chat, create a premium 16:9 first/introduction slide for the presentation.
Use my uploaded ThinkHub logo and my uploaded profile photo.
This is a presentation opening slide, **not a YouTube thumbnail**.
The slide should include the correct video title from the conversation, a short relevant subtitle if useful, my name "Daksh Khandelwal", and "Founder, ThinkHub".
Design it as a strong first impression:

- Modern, premium, clean and educational technology aesthetic.
- ThinkHub black/white/yellow-gold identity.
- Strong visual hierarchy and excellent spacing.
- My profile photo should look natural, professional and recognizable.
- The topic should be visually communicated without overcrowding the slide.
- Use tasteful topic-related visual elements rather than generic decoration.

Do not change my identity, facial structure or recognizable appearance. Do not make it look like a thumbnail or a crowded poster. Do not ask me to provide the title again; use the title already present in the conversation.

Prompt 6 — Complete YouTube Publishing Package

Using the video information already established above, create the complete YouTube publishing package. Do not ask me to repeat the title or topic.
Part 1 — Title Give me 10 strong title options with a mix of curiosity-driven, explainer-style, "how it actually works", beginner-friendly and bold/high-CTR options.
Keep them accurate and professional. Do not use misleading clickbait.
Then select the single best title and briefly explain why it is the strongest choice.
Part 2 — Description Write a crisp but informative YouTube description using the selected title.
Include:

- A strong 2–3 line hook.
- What viewers will learn.
- 4–7 concise learning points.
- A clear placeholder for the Session PDF / Notes Google Drive link.
- Connect with Me.
- Business enquiries.
- Relevant hashtags.

Use these official links exactly: YouTube: https://www.youtube.com/@ThinkHubbydaksh LinkedIn: https://www.linkedin.com/in/daksh-khandelwal-b02748391/ Instagram: https://www.instagram.com/thinkhub$_official/Facebook$: $https$: $//www.facebook.com/profile.php?id = 61579026488196X$: $https$: $//x.com/thinkhub_2026GitHub$: $https$: $//github.com/dk - khandelwal06Portfolio$: $https$: $//portfolio - website - sepia - one - 79.vercel.app/Businessenquiries$: $dk.khandelwaliitj@gmail.com$
Do not invent additional links.
Keep the final description professional, concise, readable and suitable for YouTube.

Prompt 7 — YouTube Thumbnail

Create a premium YouTube thumbnail for the video discussed throughout this chat.
Use the final/selected title and the topic information already established above. Do not ask me to repeat them.
Use my uploaded profile photo and ThinkHub logo.
Requirements:

- 16:9, 4K-quality composition.
- High click-through potential through strong visual hierarchy, not clutter.
- Light/medium modern theme with ThinkHub yellow/gold accents.
- Minimal text; use only the strongest short hook.
- Include "Daksh Khandelwal" in an elegant cursive/script style only if it improves the composition.
- "Founder, ThinkHub" may be included only if it fits naturally.
- Vary my photo position from video to video; do not use the same composition every time.
- Preserve my real facial identity and facial expression. Do not distort or redesign my face.
- Keep the ThinkHub logo visible but not oversized.
- Use one strong topic-related visual metaphor rather than many unrelated images.
- Make the thumbnail immediately understandable at small size.

Avoid excessive text, excessive icons, generic stock-photo clutter, fake screenshots, unrealistic UI and misleading visual claims.
The thumbnail should look unique to this video's subject while remaining recognizably ThinkHub.

Prompt 8 — Opening + Closing Script

Using the complete video context already established in this chat, write only the opening and closing scripts. Do not ask me for the title or topic again.
Opening Write a natural, energetic 20–35 second opening:

- Start with a strong curiosity hook.
- Introduce the topic naturally.
- Explain why it matters.
- Tell viewers what they are about to learn.
- Sound like Daksh speaking naturally, not like an AI-generated speech.

Closing Write a natural 20–30 second ending:

- Recap the core takeaway.
- Mention the Session PDF/notes if relevant.
- Invite viewers to like, subscribe or share naturally without sounding forced.
- End with a memorable ThinkHub-style closing line.

Output only: 1. OPENING SCRIPT 2. CLOSING SCRIPT
Do not write the body of the video.

Prompt 9 — Final ThinkHub Publishing Checklist

Using everything created in this conversation, give me a final publishing checklist for this ThinkHub video.
Check whether I have:

1. Verified research.
2. A complete 15-slide blueprint.
3. Detailed Deck PDF.
4. Presenter Slides PDF.
5. Completed PPT/PDF quality audit and corrections.
6. Premium first/introduction slide.
7. Final YouTube title.
8. Final YouTube description.
9. Session PDF/Notes link placeholder ready.
10. Final thumbnail.
11. Opening script.
12. Closing script.
13. Correct social/profile links.
14. No fake links, unsupported claims or obvious factual issues.
15. Final video, thumbnail and PDF checked at both desktop and mobile viewing sizes.

Give me a short final "READY TO PUBLISH" or "NOT READY" verdict and list only the remaining actions if something is incomplete.

ThinkHub Operating Principle

One video brief. One conversation. Zero repeated topic editing.
Paste the video's initial title/subject/description once. Then paste the prompts exactly as written. Every later prompt should use the context already created in the conversation.
